BEST AVAILABLE IMAGES

Defective images within this document are accurate representations of the original documents submitted by the applicant.

Defects in the images include but are not limited to the items checked	1:
☐ BLACK BORDERS	
☐ IMAGE CUT OFF AT TOP, BOTTOM OR SIDES	
☐ FADED TEXT OR DRAWING	
☐ BLURRED OR ILLEGIBLE TEXT OR DRAWING	
☐ SKEWED/SLANTED IMAGES	
☐ COLOR OR BLACK AND WHITE PHOTOGRAPHS	
☐ GRAY SCALE DOCUMENTS	
☐ LINES OR MARKS ON ORIGINAL DOCUMENT	
☐ REFERENCE(S) OR EXHIBIT(S) SUBMITTED ARE POOR QUALITY	

IMAGES ARE BEST AVAILABLE COPY.

☐ OTHER:

As rescanning these documents will not correct the image problems checked, please do not report these problems to the IFW Image Problem Mailbox.

DETAILED ACTION

Response to Arguments

1. Applicant's arguments with respect to claims 1, 8, and 18 have been considered but are moot in view of the new ground(s) of rejection. The new rejection is set forth to fully reject the claims as amended.

Claim Rejections - 35 USC § 103

- 2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 3. Claims 1-20 are rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Patent 5,748,084 to Isikoff. With regards to claims 1, 18, and 19, the Isikoff reference teaches a beacon unit (Fig. 3) comprising a modern adapted to receive communication for future use by a user, a processor coupled to the modern (Fig. 4), and a memory coupled to the modern when the processor is inactive (column 3, line 62, through column 4, line 2, and column 9, lines 15-27). It is inherent that a user programs the processes of the modern, as there is no other way for the modern to be functional in such a manner. While Isikoff does not explicitly teach non-volatile memory, the beacon is battery backed and retains power even when power is removed from the main computer and processor (Figs. 3 and 4). It would have been obvious to one of ordinary skill in the art at the time of invention that the beacon memory of Isikoff is battery backed and is therefore nonvolatile. With regards to claims 8 and 17, Isikoff teaches an activated modern processor which receives and stores data for future use by a user (Fig. 3, column 3, lines 62-65,

Art Unit: 2182

and column 5, lines 54-49) when a first processor of the host computer is deactivated (Fig. 4, column 9, lines 15-27).

- 4. With further regards to claims 1, 8, and 18, Isikoff does not specifically teach the processor being adapted to be periodically inactivated to reduce power consumption of a portable computing system. However, Advanced Configuration and Power Interface (ACPI) suspend states are notoriously well known in the art. This open specification initiative, developed jointly by Microsoft, Intel, and Toshiba, provides means of integrating power management to all parts of a PC, and includes suspend, suspend to RAM, and hibernate abilities. With this technology, peripherals can also activate a PC. It is clear from Isikoff that the modem is operational when the host processor is inactive (Fig. 4, column 9, lines 15-27), and that portions of the computer can be deactivated to conserve power (column 2, lines 12-14). It would have been obvious to one of ordinary skill in the art at the time of invention that the modem of Isikoff may operate to receive and store communication data while a main host processor is deactivated in order to conserve power in a portable computing system.
- 5. With regards to claim 2, Isikoff teaches a hard drive that is coupled to the processor (column 4, lines 15-20).
- 6. With regards to claim 3, Isikoff teaches the beacon/modern processor (Fig. 3, element 30) that operates independently of the main processor (column 9, lines 15-27).
- 7. With regards to claim 4, Isikoff teaches that the beacon communication handling section logs unimportant requests, when the main processor is inactive, to be handled at another time to save power (column 9, lines 15-32).

Application/Control Number: 09/649,268

Art Unit: 2182

8. With regards to claims 5 and 6, Isikoff teaches the beacon transmitting messages from memory when the main computer is powered down (column 6, lines 2-16, and column 9, lines

Page 4

33-52).

9. With regards to claim 7, the memory stores user profile information regarding what types of files are to be transferred and stored in the memory (column 6, lines 2-16).

- 10. With regards to claim 9, Isikoff teaches the beacon unit controls the power supply (column 4, lines 15-20, column 2, lines 12-14, and column 9, lines 15-17).
- 11. With regards to claim 10, While Isikoff does not explicitly teach non-volatile memory; the beacon is battery backed and retains power even when power is removed from the main computer and processor (Figs. 3 and 4). It would have been obvious to one of ordinary skill in the art at the time of invention that the beacon memory of Isikoff is at least battery backed and is therefore nonvolatile.
- 12. With regards to claim 11, Isikoff teaches that the beacon processor stores data into the memory (column 9, lines 15-32). Flash memory is well known in the art and it would have been obvious to one of ordinary skill in the art at the time of invention that the beacon memory could be a flash memory array.
- 13. With regards to column 12, Isikoff teaches the host computer being passed data to be processed (column 5, lines 47-51). It would have been obvious to one of ordinary skill in the art at the time of invention that the host processor would be involved in this access.
- 14. With regards to claims 13 and 14, Isikoff teaches the processor stores in memory user file names and types which are to be transferred (column 6, lines 5-11).

Application/Control Number: 09/649,268

Art Unit: 2182

Page 5

- 15. With regards to claims 15 and 16, Isikoff teaches the beacon processor stores user profile information in the memory regarding what types of files are to be transferred and stored in the memory (column 6, lines 2-16). It would have been obvious to one of ordinary skill in the art at the time of invention that either processor could have been used to store user profile identifying information into the memory.
- 16. With regards to claim 20, Isikoff teaches wireless communication with a modem (Figs. 1 and 3).

Conclusion

17. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Joshua D Schneider whose telephone number is (703) 305-7991. The examiner can normally be reached on M-F, 8-4:30.

Application/Control Number: 09/649,268

Art Unit: 2182

Page 6

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Jeffrey A Gaffin can be reached on (703) 308-3301. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Starting in October, Tech Center 2100 will be moving to the new Carlyle offices. The examiner can then be reached at (571) 272-4158. The examiner's supervisor, Jeffrey A Gaffin can then be reached on (571) 272-4146. The TC main number will then be (571) 272-2100.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
